

NB Our FL fixing packs can be used for fitting fanlights or sidelights

Sidelight Doorset Fitting Guide

Step 1 – Remove the glass from the sidelight section – see video for guidance on how to do this. Keep glass and beading safe whilst installing doorset.

Step 2 – Remove the brace piece from the top edge of the door

Step 3 – Attach straps to frame legs as normal with additional straps to the head – one middle of door section and one on the sidelight section no more than 50mm away from the joint.

Step 4 – Fit doorset into opening as per a single doorset, screwing through the sidelight leg rather than the doorframe leg.

Step 5 – Use appropriate screws to fix straps at head to lintel

Step 6 – Re-glaze sidelight ensuring beading sections are clipped back in same places they were removed from.

NB If sidelight sections are on both sides used 3 straps across the head
